A CORPORATE DASHBOARD.
IT JUST MAKES SENSE.

One of the biggest inefficiencies ProviderTrust can resolve

is streamlining compliance management from a corporate perspective.

THE PROBLEM

For organizations with multiple locations in multiple states, it can be very time consuming and expensive to manage license audit inspections.

THE STORY

One of our clients has 200+ locations across the country and previously flew a representative from corporate to each location to inspect every employee's required credentials.

They were spending thousands of dollars and man-hours each year to maintain a low level of confidence to prepare for state and federal inspections.

THE SOLUTION

ProviderTrust has enabled our client to manage each of the 200+ locations by creating a corporate dashboard.

1. The corporate dashboard allows the client to aggregate data across multiple departments, facilities, states, and regions to create different customized views.

This allows regional managers to access only the employees in their regions.

2. Additionally, ProviderTrust can set healthcare license policies to trigger email notifications when an employee is missing required licensure.

3. Furthermore, we forecast when licenses and certifications are due to expire. Digital scans of licenses can be uploaded so real-time visual inspections can be accomplished from anywhere with complete confidence.
